The stock markets rebounded strongly in April 2026 despite the situation in the Middle East remaining tense. Hopes of a ceasefire between Iran and the USA gave way to a breakdown in talks in Islamabad and the US naval blockade of the Strait of Hormuz, pushing the price of Brent back above 100 dollars and reviving concerns about stagflation. The stock markets nevertheless made strong gains, driven by a solid reporting season and enthusiasm around artificial intelligence. The Nasdaq delivered its best monthly performance since October 2022, outdoing Europe penalised by its energy vulnerability. The Fed and ECB kept their interest rates unchanged, with several of their members recommending a more restrictive monetary policy given that inflation expectations have been revised upwards.

The fund outperformed its benchmark index thanks to its positions in semiconductors and electrification. QUANTA SERVICES and INFINEON were among its top contributors, whereas ALSTOM and BROOKFIELD RENEWABLE were a drag on its relative performance. We initiated positions in TAIWAN SEMICONDUCTOR and CADENCE DESIGN SYSTEMS, thus increasing our exposure to AI-related computational infrastructure. Conversely, we switched out of KURITA WATER, ITRON and VESTAS WIND SYSTEMS and into names offering what we consider to be better risk/reward profiles.

The Hormuz crisis and high oil price have made the themes of energy sovereignty, electrification and industrial efficiency even more relevant. Plans to invest in grids on a massive scale in Europe and the USA combined with hefty AI-related capex are fuelling structural demand for computation, semiconductor and electrical equipment firms. The fund remains positioned in these performance levers and is keeping a close eye on bonds yields and also on the risk that a prolonged conflict might take a toll on global economic growth.

DISCLAIMER

The purpose of this document is to present, for information purposes only, the characteristics of Mandarine Gestion products. It in no manner constitutes a sale or subscription offer. The indices cited in this document are based on net dividends reinvested ("NR"). The described performances do not take into account fees and costs potentially charged in connection with the subscription or redemption of fund units. This document has been drawn up for information purposes only and does not constitute an offer or personalised recommendation or a solicitation to subscribe to this product. The information, opinions and analyses contained in this document do not have any contractual value. Only the information contained in the KIID and prospectus is legally binding. The prospectus is available on simple demand from Mandarine Gestion and is available on the www.mandarine-gestion.com website. Your money will be principally invested in financial instruments selected by the management company. These instruments will be subject to market fluctuations and uncertainties. Past performances do not guarantee future performances. Performances are notably not constant over time. The performance data mentioned in the document does not take into account fees and charges assessed in connection with the issue and redemption of units or shares and does not include taxes imposed by the country of residence of the client. The UCITS is exclusively destined for sale to residents of those countries in which the UCITS is registered. Sales in jurisdictions other than those countries in which the UCITS is registered are not authorised.

Additional information for Switzerland: The prospectus for Switzerland, the Key Investor Information Document, the articles of association or regulations, the semi annual and annual reports in French and other information may be obtained free of charge from the representative in Switzerland of the Fund: Carnegie Fund Services SA, 11 rue du Général Dufour, CH-1204 Geneva, Switzerland, tel: +41 22 7051178, web www.carnegie-fund-services.ch. The paying agent in Switzerland is Banque Cantonale de Genève, 17 quai de l'île, CH-1204 Geneva, Switzerland. The latest unit/share prices are available at www.fundinfo.com. Historical performance is not an indicator of current or future performance and the performance data does not take into account commissions and fees charged on the issue and redemption of units/shares.

RISK PROFILE – RISKS ASSOCIATED WITH THE PRODUCT

Risk of capital loss, equity market risk, risk linked to the ownership of small and midcaps, interest rate risk, credit risk and discretionary management risk, and to a lesser extent emerging market risk, counterparty risk and exchange rate risk. The descriptions and details are included in the complete prospectus of the UCITS. Investors are invited to read the prospectus in order to obtain detailed information regarding the risks to which the fund is exposed prior to any investment decision. This product does not offer any guarantee as to returns or the capital invested, which may not be entirely returned.

Principal Sustainable Development Goals (SDG) of the UN covered by companies held by the fund

UNDERSTANDING THE CLIMATE CHALLENGE

Definitions & acronyms

DESCRIPTION OF INDICATORS

Green Share

The green share of the portfolio corresponds to the percentage of revenues of companies eligible for the European taxonomy. This green taxonomy establishes criteria to orient finance in favour of climate-compatible activities. Three types of activities and six major environment objectives are identified:

Three types of activities identified		
Low carbon activities already compatible with a carbon neutral economy in 2050	Transition activities contributing to a carbon neutral economy in 2050	Activities making possible carbon neutrality with steep reductions in GHGs*
Six major environmental objectives		
Climate change mitigation	Adaptation to climate change	
Sustainable use / protection of water and marine resources	Fight against pollution (prevention & control)	
Transition to a circular economy, elimination of waste, recycling	Protection of healthy ecosystems	

*GHG: greenhouse gas

An activity is defined as green when it makes a substantial contribution to one of the six objectives without significantly impairing another objective and when it is in conformity with minimal social guarantees and the selection criteria.

Greenfin typology

Created by the French ecological and solidarity transition ministry, the Greenfin label guarantees the green quality of investment funds and is meant for financial players that work to promote the common good through transparent and sustainable practices. This label defines eco-activities that are part of the energy transition. These activities produce goods and services involving environmental protection or natural resource management that are designed to measure, prevent, limit or correct environmental damages to water, the air and soil and problems relating to waste, noise and ecosystems in favour of human wellbeing (OECD and Eurostat international definition). For each issuer, the eligible revenues are analysed on the "precision" level of the Greenfin label standards (annex 1 of the standards).

ENERGY	BUILDING CONSTRUCTION	CLEAN TRANSPORTATION	INFORMATION AND COMMUNICATIONS TECHNOLOGIES
WASTE MANAGEMENT AND POLLUTION CONTROL	INDUSTRY	AGRICULTURE AND FORESTS	ADAPTATION TO CLIMATE CHANGE

Exclusion: all fossil (exploration, production, exploitation) and nuclear (extraction of uranium, concentration, refining, radioactive waste management, conversion and enrichment of uranium, decommissioning) fuels. **Partial exclusion** (>33% of revenues): storage and landfill without GHG capture, incineration without energy recovery, logging (except for sustainable operations).

Carbon footprint

The carbon emissions indicator is calculated using the CO2 emissions from scopes 1, 2 and 3 of companies, relative to the total value of investments. The carbon footprint metric is ton of CO2 per million euros invested (tCO2e/Mn€). The data comes from ISS. Until March 2024, CO2 data was from scopes 1, 2 and first-tier suppliers.

Alignment scenario and temperature

The *Science Based Targets* (SBT) initiative enables companies to define and submit their greenhouse gas reduction objectives (scopes 1 and 2 + Scope 3 if this represents more than 40% of emissions) in order to respect the Paris Agreement on Climate Change (signed in 2015), whose objective is to limit global warming to under 2°C compared to the pre-industrial era and to pursue efforts to limit warming to 1.5°C. Over 900 companies throughout the world have already submitted their scenarios to the SBT. The list can be consulted on the <https://sciencebasedtargets.org/companies-taking-action> website.

Biodiversity / Mandarin Biodiversity Score

The *Mandarin Biodiversity Score*, created in-house by Mandarin, enables the evaluation of the biodiversity score and risk of companies based on three elements: company disclosures (biodiversity strategy, management of natural resources and waste, climate scenario), the pressure it exerts on ecosystems (CO2 and pollution emissions, consumption of natural resources) and finally, the double materiality (impact / dependence of the company on biodiversity).

Alignment with the taxonomy

The data regarding the alignment of revenues with the taxonomy are supplied by Sustainalytics. The share of revenues allocated to the taxonomy is calculated through a four-step process: 1/ identification of activities eligible for the taxonomy, 2/ respect of the activity with the technical criteria of the taxonomy, 3/ respect of the DSNH (Do no Significant Harm) principle, i.e. no prejudicial impact on the other environmental objectives of the taxonomy, and 4/ guarantee of minimum social standards. The figures are derived from annual reports or estimates provided by the supplier of ESG data.

GLOSSARY

GHG / Greenhouse gas

The GHGs are gaseous components of the atmosphere, both natural and anthropogenic, that absorb and re-emit infrared radiation. These gases are responsible for the warming of the atmosphere. By way of example, the lifetime of greenhouse gases in the atmosphere is approximately 100 years for carbon dioxide (CO2), 120 years for nitrous oxide and up to 50,000 years for the halocarbons (*source: ADEME*).

SBT / Science-Based Targets

SBT is a set of methodologies with a shared principle of identifying the remaining carbon budget in order to avoid exceeding 1.5°C in global warming looking out to 2100 and allocates this carbon budget to different sectors of activities. This initiative was launched by the WWF (World Wildlife Fund), WRI (World Resources Institute) and CDP (Carbon Disclosure Project), with the latter now integrating the SBT concept in its ratings.

SDG / Sustainable Development Goals

The sustainable development goals are a call to action by all countries in order to promote prosperity while protecting the planet. They go hand in hand with strategies for the development of economic growth and respond to a series of social needs while at the same time protecting the environment and fighting against climate change.
